

Changes to ILUA file number formats

Recent upgrades to the Register of Indigenous Land Use Agreements (ILUA register) have resulted in changes to the format of file numbers used to identify registered ILUAs. The new file numbers incorporate a full year reference (e.g. 2001) followed by a three digit identification number. For example, DI2001/002.

To conduct a search for a registered ILUA with an old file number format, you must convert the old file number into the new format. For example, DI01/2 becomes DI2001/002. QI01/10 becomes QI2001/010.

The following list is provided to assist you to identify registered ILUAs with old file numbers which must be converted to the new format prior to conducting a search of the ILUA register.
